# NBA Statistics Project Information Sheet

Read the directions carefully and make sure you provide **ALL** of the requested information and include complete explanations when required. For this project you are to track 5 of your favorite NBA players over a consecutive 10-game span, complete the statistics worksheet, and completely answer the questions below. The players may be from the same team or from different teams. You may use any credible source to collect the data but it is strongly encouraged that you use *http://www.basketball-reference.com*. All data must be from the current NBA season.

Scoring Rubric:

Worksheet: 75 points

~all information is provided and accurate

Follow-Up Questions: 25 points

~answers are supported by facts from the worksheet

~each answer should contain at least three complete sentences

~answer is thoroughly and clearly explained

**If you have questions or concerns please feel free to contact me before the due date.**

Follow-Up Questions:

~*answers must be in complete sentences and be supported by thorough and detailed explanations*

1. Using the information from your worksheet, which player is the best overall player? Explain why you think this player is the best. Use data from your worksheet to support your answer.

2. Is the player you chose as the best the same as who you thought was the best player before? Explain why there is or isn't a difference.

3. Why is the information from your worksheet not necessarily the best way to determine who is the best player?

4. What other information might be useful to help determine the best overall player? This information may or may not be contained in a box score or game summary. Carefully consider all of the factors that are involved in a basketball game.

5. Which statistic do you think is the most useful in determining a player's value? Which is the least useful?
